

PROPRIETARY GTM BLUEPRINT • 2026 EDITION

ZEEROCODES AVATAR, MARKETING & SECURITY

Master Customer Avatars, Communication Style, Marketing Framework & High-Converting Messaging Suite

PREPARED FOR

Zeerocodes Labs

LEAD ARCHITECT

Nuel Effiong

TARGET MARKETS

**Nigeria / Pan-Africa /
Global**

CORE FLYWHEEL

Teach • Build • Protect

1. Strategic Flywheel Architecture

Zeerocodes operates a self-reinforcing enterprise flywheel. Customer acquisition flows from high-volume educational awareness (Teach), into high-ticket custom automation retainers (Build), and matures into recurring compliance and certification seals (Protect).

1. TEACH (Academy)

The Entry Gate: Trains creators, freelancers & engineers on full-stack AI development.

2. BUILD (Studio)

The Cash Engine: Custom Next.js SaaS, n8n automations & 90-sec WhatsApp billing bots.

3. PROTECT (VibeScan)

The Enterprise Moat: AST static security scanning & tamper-proof VibeCert™ certification.

2. Master Customer Avatars

Avatar 1: "The Scale-Hungry SME Operator" (Studio / Build)

HIGH-TICKET STUDIO RETAINER

PROFILE DIMENSION	CHARACTERISTICS & BEHAVIORAL INSIGHTS
Persona Identity	Tunde Balogun (41, Lagos / Abuja / Remote) — Managing Director / COO of a ₦50M–₦500M/yr enterprise (E-commerce, Micro-lending, Logistics, Real Estate, or Healthcare).
Psychographics	Pragmatic, impatient with buzzwords, hyper-protective of cash flow. Burned by past freelance developers who took 6 months to deliver buggy WordPress plugins.
Current Bottleneck	Staff spends 5+ hours daily copying bank alerts, manually issuing PDF invoices on WhatsApp, and reconciling Excel sheets. Orders are lost after office hours.
Trigger Event	Missed a ₦3M order over a weekend; customer complaints peaked during a promo campaign; payroll grew without revenue increasing.
Core Desire	A 24/7 automated business engine that confirms Paystack/Moniepoint payments in 90 seconds, issues instant receipts, and updates stock without hiring 4 more staff.
Primary Objection	"₦1.5M is too expensive for an automation system." → Resolution: Reframe as paying for itself in 72 days by eliminating ₦400k/mo in headcount leakages and human error.

Avatar 2: "The Ambitious Builder / Tech Upgrader" (Academy / Teach)

COHORT ADMISSIONS & LMS

PROFILE DIMENSION	CHARACTERISTICS & BEHAVIORAL INSIGHTS
Persona Identity	Amina Yusuf (24, Yaba / Port Harcourt / Accra) — Freelance designer, junior engineer, or university graduate aiming for remote high-income tech careers.
Psychographics	Hungry for financial independence; exhausted by 40-hour theoretical tutorials; wants to build production-grade web apps using Antigravity, Cursor, n8n, and Next.js.
Current Bottleneck	Understands prompt writing, but cannot connect Supabase authentication, secure Paystack webhooks, or deploy hardened client portals.
Trigger Event	Sent 50+ resumes with zero response; saw peers earning \$2,500/project building AI systems; needs verified proof of competency.
Core Desire	Achieve official VibeCert™ Certified Builder status, build production applications in 48 hours, and command ₦250k–₦1.5M per client build.

Avatar 3: "The High-Velocity Vibe Founder / CTO" (Protect / VibeScan)

SECURITY AUDITS & CERTIFICATIONS

PROFILE DIMENSION	CHARACTERISTICS & BEHAVIORAL INSIGHTS
Persona Identity	Kelechi Okonjo (32, Remote / Diaspora / Techstars Alum) — Technical Founder or Solo Builder who launched an MVP in 2 weeks using AI tools.
Psychographics	Obsessed with shipping speed; harbors quiet anxiety that their AI-generated codebase has leaked OpenAI API keys or open PostgreSQL database tables.
Current Bottleneck	500+ active users, but database Row Level Security (RLS) is disabled, API keys are exposed in client JavaScript, and no rate limits exist.
Trigger Event	An institutional angel investor requested a security audit report; preparing for a major public product launch on Product Hunt or TechCabal.
Core Desire	Instant AST automated security scan with line-by-line remediation diffs and a tamper-proof VibeCert™ Seal to prove security to enterprise clients.

3. High-Converting Communication Style

The Zeerocodes Brand Voice: "The Gritty, Authoritative Systems Architect." We speak with the rigor of a senior security engineer and the commercial empathy of a battle-tested African business founder.

PRINCIPLE	✗ WHAT WE NEVER SAY (FLUFF)	✓ WHAT WE ALWAYS SAY (OUTCOMES)
No Corporate Jargon	"We leverage synergistic AI paradigms to transform your digital strategy."	"We replace 4 hours of manual invoice typing with a 90-second automated WhatsApp webhook."
African Market Mastery	"Our cloud software operates with standard web protocols."	"Built for Lagos: Handles network drops, Paystack/Moniepoint retries, and instant WhatsApp receipts."
Security as a Guardrail	"Security compliance is recommended for modern web developers."	"Shipping vibe-coded code without RLS is like building a penthouse on wet sand. We harden it."

4. Custom High-Converting Messaging Suite

A. Automation Studio Messaging (For SME Founders & Operators)

 **Cold Ad Hook:** "If your business stops making money the minute your office manager turns off their phone at 6 PM, you don't have a business—you have a bottleneck."

 **Core Value Proposition:** "We build custom AI automation engines and WhatsApp invoicing bots that save your company 120+ operational hours every month and close customer sales in under 90 seconds."

"Hey [Name], noticed your team handles customer inquiries and payment receipts manually in WhatsApp DMs.

We just deployed an automated Paystack-linked engine for an e-commerce brand in Lekki that validates alerts, generates PDF receipts, and updates the inventory database in 45 seconds—zero human typing.

Here is a 45-second demo screen recording: [Demo Link]

Would you be open to a 15-minute diagnostic call this Thursday at 2 PM WAT to calculate your exact monthly payroll savings?"

B. AI Income Academy Messaging (For Career Builders & Freelancers)

Cold Ad Hook: "Syntax isn't what gets you paid in 2026. Knowing how to architect, ship, and cryptographically secure full AI workflows that businesses pay millions for is."

Core Value Proposition: "Go from basic prompt writing to deploying enterprise-grade Next.js web applications, n8n automations, and cryptographic security systems with official VibeCert™ certification."

Objection Handler ("I don't have a CS degree"): "You don't need 4 years of theoretical algorithms. We teach visual logic, AI-assisted development tools (Cursor/Antigravity), and exact deployment architectures. If you understand how data moves between a customer and a database, you can build production apps."

C. VibeScan AST Security Messaging (For Founders & Dev Teams)

Cold Ad Hook: "You shipped your app in 5 days with AI. But did you leave your database RLS open to the entire internet?"

Core Value Proposition: "The premier AST static security engine built specifically for vibe-coded applications. Detect leaked API keys, bypass-prone authentication routes, and unauthenticated database queries before your users or hackers do."

Objection Handler ("Our app is too small for security"): "Automated bots don't wait for your startup to reach Series A. Scanners crawl GitHub and public endpoints looking for exposed Supabase keys within 15 minutes of deployment. Fixing a vulnerability takes 2 hours today; recovering from a leaked user database takes years."

5. GTM Execution Matrix & Channel Allocation

CHANNEL	TARGET AVATAR	LEAD MAGNET / CORE OFFER	PRIMARY CONVERSION KPI
WhatsApp Direct & SME Communities	Avatar 1 (SME Operators)	45-Second Video Teardown of manual bottlenecks + ROI Calculator	Book Free 30-Min Discovery Session
YouTube & LinkedIn / X Deconstructions	Avatar 2 (Career Builders)	"Building & Securing a Full SaaS in 3 Hours with Antigravity Stack"	Enroll in VibeCode Labs Cohort (₹95,000)
Tech Twitter, GitHub & Founder Groups	Avatar 3 (Vibe Founders)	Live AST Scanner Sandbox + "Top 10 Vibe-Coding Vulnerabilities"	Order VibeScan Audit & VibeCert™ Seal

ZEEROCODES AUTOMATION LIMITED

Enterprise Systems • Anti-Overbooking Guardrails • VibeCert™ Security Seals

WAT Office Hours: 10 AM - 6 PM
